### **WHAT IS CYGOOSE TRIPLE-THREAT-PROTECTION?**

It's an A.I. Based software that learns your organization's computer/user environment and behaviors. The ongoing intelligence provides cyber threat protection, system maintenance and optimization ability. Most equipment & software failures are a result of old equipment and/or under maintained equipment. The software also creates alerts and reporting providing aide to existing IT Support if exists. TRIPLE-THREAT-PROTECTION does not include remote & onsite support; however, all packages below offer TRIPLE-THREAT-PROTECTION. This requires an annual commitment.
